DETAILED ACTION

Election/Restrictions

1. Claims 18-30, 39-40, 42, and 44-46 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species and method, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/26/06.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 recites the limitation "said magnetic bonding layer" in line 5. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this

Art Unit: 1773

subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-17, 31-38, 41, and 43-44 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Yamanaka et al. (US 2002/0064689).

Yamanaka et al. disclose a magnetic recording medium and apparatus having the following structures as shown in Figures 1 and 13:

Fig. 13

The reference teaches that the magnetic layers are antiferromagnetically coupled across the coupling layers. The reference also teaches that the enhancing layers (corresponding to the claimed bonding layers) are ferromagnetically coupled with the adjacent magnetic layer. See paragraphs 0022, 0024, 0028, 0053, 0055, 0090-0094, 0109, 0111.

The reference is silent with regard to the claimed relationship between the dynamic coercivities of each of the antiferromagnetically coupled magnetic layers. However, the examiner maintains that the structure taught by Yamamaka et al. inherently satisfies these features of the claims. The reference teaches a recording medium that is substantially the same in structure and composition as that claimed by Applicant. In addition, the reference shows hysteresis curves for the structures shown above (see Fig 1 and 13) which are substantially the same as shown by Applicant. The hysteresis curves shown by Yamanaka et al. are shown below:

Fig. 14

Fig. 11

Thus, the examiner maintains that the recording medium having the structure, composition, and magnetic characteristics as shown by the prior art would inherently satisfy the claim limitations directed to dynamic coercivities, static coercivities, the relationship between dynamic and static coercivity, and the relationship between anisotropic field of the respective magnetic layers.

It has been held that where claimed and prior art products are identical or substantially identical, or are produced by identical or substantially identical processes, the burden of proof is shifted to applicant to show that prior art products do not necessarily or inherently possess characteristics of claimed products where the rejection is based on inherency under 35 USC §102 or on prima facie obviousness under 35 USC §103, jointly or alternatively. *In re Best, Bolton, and Shaw*, 195 USPQ 430. (CCPA 1977).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Girt (US 6815082) is cited as art of interest.
